Seizing the Connected Vehicle Services Opportunity

In June, the AECC and Mobile World Live hosted a webinar that discussed how we can shape the success of the rapidly expanding Connected Vehicle Services industry by preparing for the implementation of these services and addressing the impending data requirements. This video provides an introduction to the AECC Proof of Concept (PoC) program and an overview of two existing PoCs. The first PoC is dedicated to using opportunistic data transfer for connected vehicles to reduce cell congestion in existing mobile networks. The second PoC focuses on data and intelligent services required by network and distributed computing. This is accomplished through the development of use cases, technical reports, and reference architectures. For more information about the AECC and how your organization can get involved, please contact us.
